

Git Repository Creation Steps

This document outlines the steps taken to create the Git repository and the required folders.

1. Repository Initialization:

- Opened a terminal or command prompt.
- Navigated to the desired directory where the repository was to be created.
- Executed the command: ```
 - `git init 2302031000067`
- Changed the current directory to the newly created repository using the command: ``cd 2302031000067.`

2. Folder Creation:

- Created two folders named "Assignment_1" and "Assignment_2" using the following commands:
 - `mkdir Assignment_1`
 - `mkdir Assignment_2`

3. Word File Creation:

- Created this Word file, ``instructions.docx``, documenting the steps.

4. Adding and Committing (Optional but recommended):

- Added the ``instructions.docx`` file to the Git staging area using: ``git add instructions.docx``
- committed the changes with a descriptive message: ``git commit -m "Initial commit with instructions"```

Repository Name: **2302031000067**

Folders:

- Assignment_1
- Assignment_2

Word File: **instructions.docx**
